Winco Psychiatric Windows help secure day-lit healing environments for hospital mental health patients.

Winco recognizes natural light promotes a healing environment for hospitals and mental health institutions. Our psychiatric windows are engineered to be robust and secure behind a non-institutional framing system with protective glazing that delivers natural daylight with the security and protection required for psychiatric care facilities.

Our psychiatric windows resist or minimize:
- Attacks from patients wielding blunt or sharp objects
- Attacks from intruders
- Exposure to flame and heat
- Exposure to chemicals and bodily fluids
- Abrasion of glazing (polycarbonate protective)
- Prying or cutting of frame materials
