

Robert Wood Johnson Hospital

New Brunswick, NJ

The Other Side of Psychiatric Windows

Safety first. New windows were needed for the psychiatric ward of the Robert Wood Johnson Hospital in New Brunswick, New Jersey. These were not to be just ordinary windows. They needed to be made to resist human impact and reduce chances of ligature injuries for psychiatric patient safety.

The Solution

WINCO Window and Window City worked together in determining the best window option for the hospital's needs, then Window City's in-house crew installed more than 40 specially designed WINCO 8800 Psychiatric 1450L Fixed Projected Casement windows. Instead of unsightly psychiatric screens, WINCO added an accessory panel to each window to make them look uniform on the outside while providing the required patient protection on the inside. The windows are tested to resist breakage from more than 300 pounds of swinging force. Just as importantly, these windows allow for healing natural light to flow into the patient rooms.
