

Winco's Transira® Windows are OutSMARTing the Industry

Triple Technology Offers Energy, High Performance, Security and Health Benefits

WINCO has launched a super-performing new product, Transira™ Windows. The Transira pack all the benefits of two technologies into one product — insulated thermal glass and high-performance shades.

Transira™ Windows feature a motorized shade built in between the panes of thermal glass windows, which can be controlled via a SMART building control system.

Increased Energy Savings — The built-in shade adds savings of 10-25 percent over traditional thermal windows. Say goodbye to 91 percent of solar energy, 97 percent of glare, and 99.9 percent of UV rays.

Unique Security Benefit — The shades have a one-way transparency feature that provides building occupants with a clear outside view while blocking anyone from seeing in. And, the shades in a building can be simultaneously lowered or lifted in seconds, which is a safety function that's ideal for school campuses or federal facilities.

Healthy Environment — With no separate window covering components to collect allergens and airborne pathogens, Transira™ Windows are easy to keep clean and leave air healthy.

Reduced Construction Costs and Timelines — Because they are an integrated product, Transira™ Windows cut down on multiple trades, vendors, project complexity, and extended timelines. One vendor specs, designs, and installs the windows.

Reduced Carbon Footprint — Transira™ Windows can give projects the potential to earn up to 9 LEED points.
